# Introduction, Safety, and Warnings

About this manual: This Manual was written to help you get the most performance, comfort, enjoyment and safety when riding your new pedal scooter. It is important for you to understand your new pedal scooter. By reading this manual before you or your child go out on your first ride, you will know how to get the most from your new pedal scooter. It is also important that your or your child's first ride on your new pedal scooter be in a controlled environment, away from cars, obstacles, and other riders.

## **General Warning:**

Riding a pedal scooter can be a dangerous activity, even under the best of circumstances. Proper maintenance of your new scooter is your responsibility and helps reduce the risk of injury. Certain conditions may cause components to fail without fault of the manufacturer. The scooter can and is intended to move and it is therefore possible to lose control, fall off and/or get into dangerous situations that no amount of care, instruction or expertise can eliminate. If such a thing occurs, you can become seriously injured or die, even when using safety equipment and other safety precautions.

## **Ride at your own risk and always use common sense**

This manual contains many warnings and cautions concerning the consequences of failing to inspect, maintain, or properly use your pedal scooter. Because any fall can result in serious injury or even death, we do not repeat the warning of possible serious injury or death each time such a possibility is mentioned in this manual or the risk of falling leads to a warning.

## **Always use proper safety equipment and riding attire**

Always use appropriate safety equipment, such as a helmet, elbow pads, knee pads, gloves, and wrist guards. A helmet is not only a good idea but may be legally required in your community. To protect yourself or your child, the helmet must meet CPSC, 16 CFR 1203, requirements and be worn correctly.

Always wear appropriate clothing and shoes, including long sleeved shirts and long pants and lace up or similar shoes with rubber soled. Never ride barefoot or in sandals and make sure that shoelaces or other fasteners are tied and kept away from the wheels and drive system of the scooter.

## **Rider use and required parental supervision**

### **Riders must not exceed the weight limit of 170 pounds (77kg)**

The age grade for the scooter is for ages 13 and older. Just because someone is within the age and weight limitations specified for the scooter, does not mean that his/her size is appropriate to fit or maintain control of the scooter or that he/she is capable of safely operating the scooter. You are the best judge of whether you or your child can safely operate the scooter; this includes determining whether your child is at the appropriate developmental stage for safe use of the scooter. Any rider that is unable to fit comfortably on the scooter should never attempt to ride it. A parent's decision to allow their child to use the scooter should be based on the child's maturity, skill and their ability to follow rules. Keep this scooter away from small children and remember that it is intended for use only by persons who are, at a minimum, able to comfortably and safely operate the scooter.

Children operating the scooter should be supervised by an adult at all times. Parents should ensure that children only use the scooter safely and within their age and physical limits.

This manual contains very important safety information. It is your responsibility to completely review this information and make sure that all riders understand all of the warnings, cautions, instructions and safety topics addressed in this manual and to assure that all riders are able to safely and responsibly use the scooter. You should periodically review and reinforce all information in this manual with all riders, especially children. You should also regularly inspect and maintain your scooter to insure the safety of all riders. Make sure that your new scooter is properly fitted to any child riding it; that it is in good repair and safe operating condition; that you and your child have gone over the use, operation and safety information in this manual; that you and your child have learned and understand what to do and what not to do with your new scooter, including observing all applicable laws, rules and common sense.

Children should be made aware of all possible riding hazards and correct riding behavior before they ride the scooter! Please explain the following to them as often as necessary.

## **Safe riding practices and warnings**

- Check and obey all local laws or regulations which may be in effect in the locations where the pedal scooter may be used.
- Always wear a helmet and other safety equipment and appropriate clothing and shoes. Always keep the chin strap on the helmet securely bucked.
- Children must be supervised by an adult to be safe.
- Do not ride on ramps, half pipes, skateboard parks, or empty swimming pools.
- Keep both hands on the handlebars at all times.
- Never allow more than one person to ride the scooter at one time and never try to tow anything.
- Do not use near steps, water, or swimming pools
- Do not ride in wet weather.
- Do not ride while using a cell phone or other electronics or while wearing headphones.
- Never hitch onto another vehicle or let yourself be pulled or pull anyone or anything while riding the scooter.
- Do not ride on hills and avoid excessive speed.
- Avoid sharp turns, bumps, drainage gates, and other obstacles.
- Do not ride at night or where there is limited visibility.
- Do not ride indoors or on surfaces that could become damaged such as carpet or flooring.

## Pre-ride safety checklist

- Check to make sure that the brake system is functioning properly.
- Check to make sure that all components are properly secured and functioning according to manufacturers specifications.
- Components must be maintained and repaired and only with the manufacturer's authorized replacement parts. Installation should only be performed by qualified personnel.

## Before you begin assembly

### Estimated assembly time

You should allow approximately 20 minutes for assembly.

Assembly by adult with mechanical experience is strongly recommended.

**Warning: do not use non-original or non-recommended products with your pedal scooter.**

Altering the original components or the use of non recommended replacement parts may or may not be compatible with the design and will void the warranty and may cause an unsafe condition resulting in serious injury or death

## Required tools

6mm Allen key

8mm and 10mm wrenches

15mm wrench

Bicycle style tire pump for  
Schrader valve tires with  
pressure gauge

Phillips screwdriver

# Pedal scooter parts

1 Handlebar

2 seat w/storage compartment

3 frame

4 Pedals x2

5 front wheel

6 rear wheel

7 chain

# Before you ride and routine safety checks

Before you ride always check for the following:

## **Safety gear**

Always wear proper protective gear such as:

- Approved safety helmet. (Helmet may be legally required by local law or regulation in your area.)
- Elbow pads, knee pads and wrist guards
- Long sleeved shirt, long pants
- Gloves
- Lace up shoes with rubber soles

## **Brake**

Check the brakes for proper function. When lever is squeezed it should slow/stop the rear wheel without excessive effort. Make sure that the brakes are not rubbing when the lever is not being squeezed. Do not ride the scooter if the brakes are not functioning properly.

## **Tires**

Inspect the wheels/tires for excess wear and replace if necessary. Regularly check the front tire pressure and re-inflate as necessary

## **Frame, fork and components**

Always carefully inspect your scooter before you ride. Check for cracks, broken, worn or loose components which should be repaired or replaced before you ride.

## **Pre-ride checklist**

### **Loose Parts**

There should not be any unusual rattles or sounds from loose parts or broken components. If you are not sure, ask an experienced mechanic to check or call customer service.

### **Brake**

Check the brake for proper function. When you squeeze the lever, the brake should provide positive braking action. When you apply the brake with the pedals turning, the brake should stop the scooter.

### **Tire inflation**

Periodically inspect the tires for excess wear and replace as needed. Regularly check the tire pressure and inflate as needed.

### **Safety Gear**

Always wear proper protective equipment such as an approved safety helmet. Elbow pads, knee pads, pants and long sleeves are recommended. Always wear shoes, never ride barefooted or in sandals, and keep shoelaces tied and out of the way of the wheels and drive system.

### **Frame, Fork and Handlebars**

Check for cracks or broken connectors. Although broken frames are rare, it is possible for an aggressive rider to run into a curb or wall and wreck, bend or break the frame. Get in the habit of inspecting your product regularly.

# Troubleshooting

Problem	Possible Cause	Solution
Scooter runs sluggishly	Riding conditions are too severe	Use only on solid, flat, clean and dry surfaces such as pavement or level ground.
	Tires are not properly inflated	The tires are inflated when shipped but they in variably will lose some pressure between the point of manufacturing and your purchase.
	Product is overloaded	Make sure you do not overload the product by allowing more than one rider at one time, exceeding the 170lb. Maximum weight limit, going up a hill or towing objects behind the product.
	Brakes are not adjusted properly	Adjust the brakes
Scooter makes loud noises or grinding sounds	Chain is too dry	Apply a lubricant such as 3 in 1 or Tri-Flow to the chain
